

Thank you for your purchase of the **LensAlign MkII**. Your LensAlign package contains 7 precision manufactured parts, including the 10.5" Focus Display Ruler. Assembly will only take a few minutes and no tools are needed. Please follow the step by step assembly instructions below. You will notice that the circled letters (A)(B)(C) printed on each part will align with the same letter on adjacent parts, as shown in figure 6 below, ensuring that all parts are correctly positioned.

Gather the 7 pieces that make up LensAlign MkII on a clean, flat surface.

Slide the **Front Plate** and **Right Stand** into place. Letters **A** will be aligned

Slide the **Left Stand** into place. Letters **B** will be aligned.

The **Base Assembly** slides in from the back engaging 3 of its 4 tabs into the **Left & Right Stands** and **Front Plate**.

When fully installed, the **Base Assembly** letters **A(B)(C)(D)** will be aligned as shown in Figure 6.

Intersection of the **Front Plate**, **Left Stand**, and **Base Assembly**, showing the alignment of letters **B**.

Prepare the **Rear Plate** to be installed into the mating slots of the **Left and Right Stands**.

Slowly slide the **Rear Plate** into slots **C(D)**, bending the **Plate** slightly to allow the **Base Assembly** tab to clear.

When the **Base Assembly** is properly installed, all four tabs will be fully engaged with the **Stands and Plates**.

Install the **Top Strut** by first engaging its front tab with the **Front Plate** at letter **E**.

Pivot the **Top Strut** downward so that it fully engages with **Slot F** on the **Rear Plate**.

Remove the glossy protective plastic from both sides of the **Display Ruler**. Either the **A** or **B** side can face up.

Slide the left edge of the **Display Ruler** so that the notches engage with their mating notches in both **Plates**.

Lower the right side of the **Display Ruler** until the right notches align and just touch the uprights of both **Plates**.

Press down on the red zero, and then between the numbers 20 and 24. The **Ruler** will click into place. That's it!
