

## **CLF-456 Lens Replacement Foot**

fits Canon EF400mm f2.8L IS II, EF500 f4L IS II, EF600 f4L IS II and EF200-400 f4L IS 1.4x \*may fit other lenses not listed

## SKU: CLF-456

NSN's replacement feet for popular telephoto lenses are made of super strong 6060 aluminum and precision designed to be strong, lightweight and a perfect fit. The integrated arca-swiss compatible design will fit any arca-swiss style quick release clamp found on popular tripod support heads such as Wimberley®, Really Right Stuff, Kirk, 4th Generation Designs, Jobu Design, Custom Brackets, Benro®, Induro®, Arca-swiss and many others.

## **INSTALLATION INSTRUCTIONS**

- With supplied hex key wrench remove original lens foot from the rotating collar of the lens.

  Set 4 screws aside.
- Carefully line up the 4 holes of the NSN replacement foot with the 4 holes in the lens foot mount on the rotating collar of the lens.
- Re-install each of the 4 original screws, one at a time, leaving them each only partially tightened.
- With the 4 screws partially tightened, check the exact position of the replacement foot to ensure it is properly aligned, then tighten each screw thoroughly.

The two small screws included with the foot are "safety stop" screws, which can prevent the foot from sliding out of a partially-loose quick-release clamp when installed. These can be installed or removed, per user preference, with the included small hex-key wrench. Check all screws periodically, to ensure they are tight. Use of blue Loctite® threadlocker or other thread-locking adhesive is optional.

This foot also fits original Canon EF500mm f4L IS, EF400mm f2.8 IS and EF600mm f4 IS, and may also fit other Canon lenses. For legacy lenses shorter screws may be necessary; please contact us for details.

If you have any questions about installation please contact our friendly customer service—we are more than happy to assist!
